

GLOBAL DISTRIBUTED FIBER OPTIC ATTITUDE SENSING

Due to the successful development of rocket vehicle recovery technology, the low-orbit satellite (LEO) launch costs have dropped significantly, The number of low-orbit satellites deployed globally will increase substantially in the foreseeable future.

From concept formation to product manufacturing, Aegiverse inertial sensor technology is very suitable for localized production capacity and provides economical inertial solutions. Besides, we are also actively deployed in related aerospace industry applications for the upcoming New Space Era.
